

# Nursing Learning Lab

California State University  
Dominguez Hills, California

---

This project remodeled approximately 5,000 square feet in the Kinesiology and Health Science building for a nursing skills laboratory that includes a simulator lab, patient exam room, central video control rooms, 30 seat “smart” classroom, student computer workstations, conference rooms, and office space and clerical workstations. The new Nursing Skills Lab will support pre-licensure courses that will be offered in the Fall Semester of 2007. The Nursing Skills Lab will allow students to practice patient care procedures and skills in a simulated environment prior to performing these same procedures and skills in a hospital setting. The Men’s Locker Room will be renovated as part of this project.
