

Student Health Center

University of Southern California
Los Angeles, California

"The seamless transitions encountered by the clinical personnel and students are a testament to the skills that you possess in working with difficult conditions. Imitation being the sincerest form of flattery is certainly true in that everyone who sees the wonderful work you've done wants you to do the same for them! Our projects have all varied in scope, size and challenge - from the Student Health Center to the Career Center to the School of Education to the School of Dentistry - yet you treated each as if it were the only, and most important project that you were working on."

*Jay Fischer, Project Manager
University of Southern California*

API Consultants provided Programming, Planning, Architectural/Engineering and Interior Design services for the remodel of the USC Student Health Center. The remodel was done in two phases; phase one which took place in 2003, included the remodel of all the MD offices and exam rooms to create additional exam rooms and larger offices, as well as the remodel of the procedure rooms and creation of a new Triage area and counseling center. Phase two remodel, which took place in 2005, included the complete reconfiguration and remodel of the Radiology, Laboratory and their support services, as well as the cashier area, reception, scheduling, compliance and immunization area.
